

The NAB petition 04-160 prohibiting Satellite Radio to broadcast traffic and weather is outrageous and unjust. XM Radio subscribers pay for these services and the great programming they offer. By passing this law the Federal Government is giving the impression of being against technology. The ability of being able to broadcast their quality programs and giving local weather and traffic is a big step in the technology world. Bullying the satellite radio community should and will not be tolerated. The satellite radio community is strong and will prosper in the end.
